

Proposal: Supabase Pro Plan

Cloud database for GCare PhilHealth Benefits Utilization Program

Prepared for: Global Care Canlubang Management / Finance

Prepared by: IT / Systems · Project: philhealth-yakap-flow monitor

Requested subscription

USD \$25 / month

Supabase Pro plan

≈ ■1,400 / month*

*Approximate PHP amount depends on exchange rate at billing time.

1. Purpose

This proposal requests approval to upgrade the project's Supabase account from the free tier to the Pro plan at twenty-five US dollars (\$25) per month. Supabase is the cloud database that stores automatic logs when staff complete a patient pathway in the GCare PhilHealth Benefits Utilization Program (flow guide + monitor dashboard).

2. What the system does today

- Staff use the PhilHealth pathway guide (ER, OPD, Direct Admission, Day Surgery, Rehab, and other flows).
- When a pathway is finished and "New Patient" is selected, the system saves one anonymous completion record.
- Managers can open the Flow Monitor Dashboard to see totals by month, pathway, and entry type (ER / OPD / Direct).
- No patient name or PhilHealth number is stored in this log — only pathway type, optional branch, entry type, and time.

3. Why the free plan is not enough long-term

- Free projects can be paused after inactivity and have tighter limits on database size, connections, and support.
- As more staff use the guide every day, completion records will grow; Pro provides higher reliable storage and capacity.
- Hospital operations need a stable, always-on database so monitoring does not stop without notice.
- Pro includes better performance, daily backups options, and production-grade limits suitable for live hospital use.

4. What \$25 / month covers (Supabase Pro)

- Production-ready project that stays active (not paused for inactivity like free hobby use).
- Larger database storage allowance for months/years of pathway completion logs.
- Higher capacity for concurrent staff use across stations.
- Access to features and limits appropriate for an operational hospital tool, not only a trial.

5. Benefit to Global Care Canlubang

- Visibility: how many patients were guided through each PhilHealth pathway.
- Accountability: objective monthly counts for ER, OPD, Direct Admission, Day Surgery, and specialty flows.
- Planning: data to support staffing, training, and process improvement discussions.
- Low overhead: logging is automatic — staff do not fill a separate form after each patient.

6. Cost summary

Item	Amount
Supabase Pro subscription	USD \$25.00 / month
Estimated annual cost	USD \$300.00 / year
Approx. monthly in PHP*	≈ ₱1,400 / month

7. Risk if not approved

- Free-tier limits or project pausing can interrupt monitoring without warning.
- Loss of continuous historical counts reduces the value of the dashboard for management.
- Rebuilding logs later is not possible for periods when the database was unavailable.

8. Recommendation

It is recommended that Global Care Canlubang approve the Supabase Pro plan at USD \$25 per month for the PhilHealth pathway guide and monitor. The cost is modest relative to the operational insight gained, and it keeps the system reliable for daily hospital use.

9. Requested action

- Approve monthly operating expense: USD \$25 (Supabase Pro).
- Authorize IT/Systems to subscribe using the hospital's preferred payment method.
- Review usage after 90 days (record volume and dashboard usefulness).

Note

Supabase pricing is set by the vendor in USD. Final PHP cost follows the card/bank conversion on billing date.
